

Plants – Planting Beans

- In science we are learning about plants.
- Kiki is going to do an experiment to investigate what plants need to grow big and strong.
- What do you think Kiki needs to do to make her bean grow?
- Kiki is going to keep a diary each week to show how her beans are growing.
- Kiki has also been given some sunflower seeds, already planted so hopefully these will be growing soon.

Kiki's instructions for planting a bean.

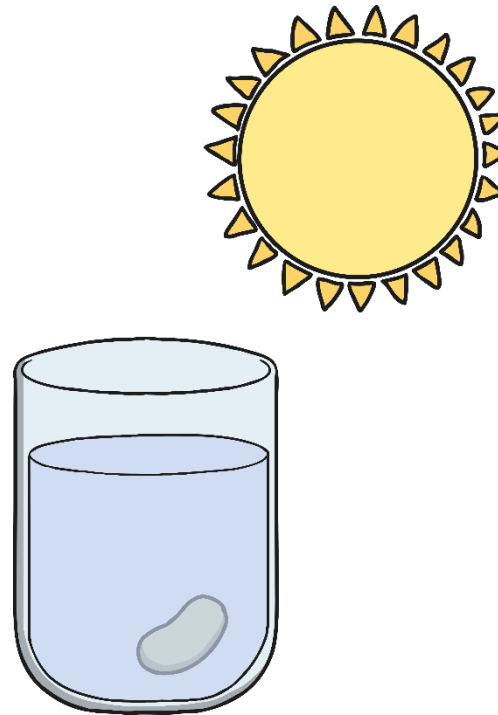

- First put some soil in a pot.
- Next push your bean inside the soil.
- Then give it some water. Not too much!
- Now put the pot somewhere warm and sunny.

What will happen if ...?

- What will happen if we don't put the bean in any soil?
- Kiki will:
 - put a bean in a pot.
 - give it water
 - put it in the light.

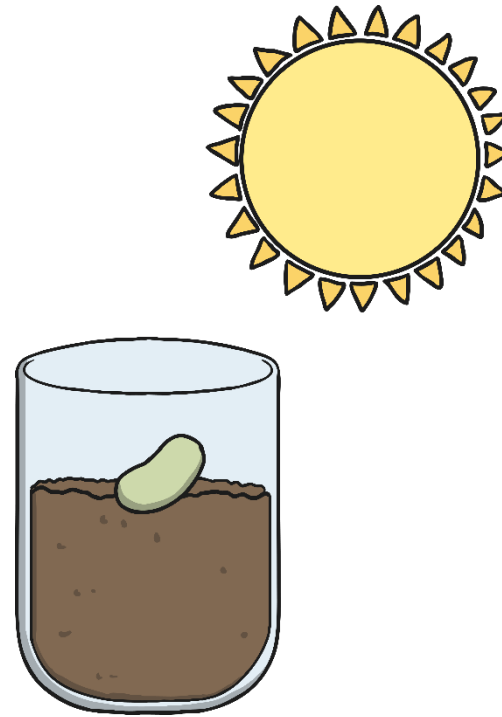

What will happen?

What will happen if ...?

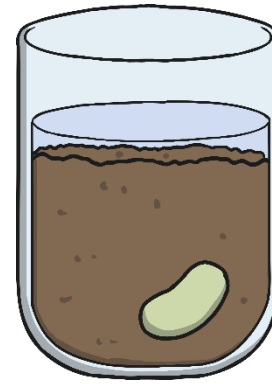

- What will happen if we don't give the bean in any water?
- Kiki will:
 - put a bean in a pot.
 - plant it in soil
 - put it in the light.

What will happen?

What will happen if ...?

- What will happen if we put the bean in the dark?
- Kiki will:
 - put a bean in a pot.
 - plant it in soil
 - give it water.

What will happen?

Task

It would be really good if you were able to grow your own plant, either in pots or in your garden, this can be any plant.

If you are able to grow your own plant, please keep a record using drawings or photographs to show how it is growing
